Objectif du guide (French instructions - English instructions on next page)

Ce guide de coloration a été conçu comme un outil pratique pour accompagner notre clientèle dans la personnalisation de nos motifs d'imprimés digitaux, en fonction de leurs goûts, de leurs projets ou de leurs palettes couleurs.

Chaque motif y est présenté avec des informations techniques essentielles à la recoloration : le numéro du support d'échantillon, le nombre de couleurs présentes dans le motif, et un niveau de difficulté qui indique à quel point il est facile (ou non) de modifier ses couleurs.

Qu'est-ce que la recoloration?

La recoloration est le processus qui consiste à modifier les couleurs originales d'un motif digital, afin de l'adapter à une autre palette, à une tendance saisonnière ou à une direction artistique spécifique.

Nos motifs sont pensés pour être recolorables, à différents degrés, en utilisant notre nuancier de couleurs Patlin.

Les 4 niveaux de difficulté de coloration

Tous les motifs présentés dans ce guide sont classés selon un système à 4 niveaux, allant de très facile à très difficile. Cette échelle vous aide à comprendre dans quelle mesure il est possible de modifier les couleurs d'un motif, et à quoi vous pouvez vous attendre en termes de rendu final

Niveau 1 - Coloration très facile

Cet icône signifie que la coloration du motif est simple, rapide et exactement fidèle à notre nuancier de couleurs Patlin.

Les couleurs sont bien séparées, sans effets visuels compliqués. Vous choisissez une couleur, et elle ressortira telle quelle sur l'échantillon.

Parfait pour des colorations précises, sans surprise.

Niveau 2 – Moyennement facile :

Motifs simples à recolorer, mais comprenant parfois des textures fines ou plusieurs petits détails complexes. Ce niveau indique que la couleur choisie apparaîtra très proche de celle du nuancier Patlin, mais de légères variations peuvent se produire. Cela peut être causé par des superpositions de motifs ou par de légères transparences dans le dessin.

Niveau 3 – Coloration intermédiaire :

Ces motifs sont très complexes à modifier. La couleur est influencée par plusieurs effets : saturation, transparence, luminosité, superpositions...

Il est impossible d'obtenir une couleur exacte avec ce type de motif.

Nous pouvons tenter une adaptation dans l'esprit de la palette choisie, mais le résultat reste imprévisible.

Niveau 4 – Très difficile :

Ce niveau concerne les motifs qui sont généralement composés d'un seul calque (ou d'une seule couche), ce qui rend la recoloration très difficile à contrôler. On peut essayer d'appliquer une nouvelle couleur selon vos demandes, mais cela affectera tout le motif en bloc, souvent de manière aléatoire ou imprévisible. Certaines couleurs peuvent apparaître altérées, et il est impossible de modifier des zones précises.

Guide Objective (English instructions)

This coloring guide has been designed as a practical tool to assist our clients in personalizing our digital print designs according to their tastes, projects, or color palettes.

Each design is presented with essential technical information for recoloring: the sample support number, the number of colors in the design, and a difficulty level indicating how easy (or challenging) it is to modify its colors.

What is Recoloring?

Recoloring is the process of modifying the original colors of a digital design to adapt it to a different palette, a seasonal trend, or a specific artistic direction.

Our designs are created to be recolorable to varying degrees using our Patlin color chart.

The Four Levels of Coloring Difficulty

All designs presented in this guide are categorized according to a four-level system, ranging from very easy to very difficult. This scale helps you understand the extent to which a design's colors can be modified and what to expect in terms of the final result.

Level 1 – Very Easy Coloring

This icon indicates that recoloring the design is simple, quick, and perfectly aligned with our Patlin color chart.

The colors are clearly separated, without complex visual effects. You select a color, and it will appear exactly as chosen on the sample.

Ideal for precise coloring with no surprises.

Level 2 – Moderately Easy

These designs are simple to recolor but may include fine textures or multiple small, intricate details. This level indicates that the chosen color will appear very close to the Patlin color chart, though slight variations may occur. These can result from overlapping patterns or subtle transparencies within the design.

Level 3 – Intermediate Coloring

These designs are more complex to modify. Colors are influenced by several effects: saturation, transparency, brightness, overlays, and more.

It is not possible to achieve an exact color with these designs.

We can attempt an adaptation in the spirit of your chosen palette, but the result may be unpredictable.

Level 4 – Very Difficult

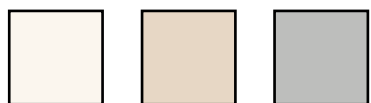

This level applies to designs generally composed of a single layer, making recoloring very difficult to control. We can try to apply a new color according to your requests, but it will affect the entire design as a whole, often in a random or unpredictable manner. Some colors may appear altered, and it is impossible to modify specific areas.
